

Single Storey Extension to form Garage / Guest Room & Play Room

Architectural Design

This project involved gaining planning approval for an extension, the extension was to give a better flow to the family space in the property as well as a useable garage space and a guest bedroom. The result was a timber clad, timber frame single storey extension. The location of the property within the conservation area had to be considered as part of the design as well the extensions proximity to existing trees. The result is a flexible space that will be able to adapt with the family as they grow and their needs change.
